Member and/or Staff \$49

Non Member \$139

Meal Choice  Beef  Fish

Self Park \$6 / Valet \$20

Doctor's Hotline / 714.634.8992

Fax / 714.978.2686

This presentation will discuss the factors that determine whether root canal treatment should be performed to retain a mutilated tooth or whether the tooth should be extracted and replaced using a dental implant or a fixed partial denture. A hierarchy of decision making will be presented based on the best available scientific evidence and clinical practice experience.

## Course Objectives

Following this presentation, participants will be able to:

- 1 Identify the factors that should be considered when determining whether to perform root canal treatment or extract a tooth and replace it using a dental implant or a fixed partial denture.
- 2 Compare the clinical survival rates of root canal treatment, dental implants, and fixed partial dentures.
- 3 Compare root canal treatment and dental implants based on complications or associated interventions, economics, and psychosocial factors.

Shane White,  
BDS, MS, MA, PhD

Dr. White graduated from dental school at Trinity College, Dublin, Ireland, spent several years in private practice, then received Certificates in Prosthodontics and Endodontics, and an MS degree in Oral Biology from UCLA, as well as a PhD in Craniofacial Biology from USC. He has won several major awards for his research. He has held three National Institutes of Health (NIH/NIDCR) grants as principal investigator. His current research interests include dental biomaterials and genetic-structural relationships in enamel and dentin. He has authored over 80 research papers. He has given several hundred invited scholarly presentations. Currently, he is Professor at the UCLA School of Dentistry, where he has served as Chairman of the Section of Endodontics, and now serves on the UCLA Faculty Senate. He is also a faculty member of the UCLA Center for Esthetic Dentistry and of the Center for Craniofacial and Molecular Biology at the USC School of Dentistry.
